

PRE-ASSEMBLED PROCESSING SYSTEMS

As pioneers in the design and manufacture of pre-assembled plants for export markets over the past thirty years, Alvan Blanch have acquired a unique level of specialist experience, covering a wide range of processing applications.

Some of these plants - such as feed mills and flour mills - have become standard Alvan Blanch products, while other one-off systems have been designed to meet the specific needs of our clients.

In each case, the pre-assembled concept ensures that installation and site work costs are minimised, transit losses are avoided and project turnaround time is greatly reduced.

Containerised Feed Mill - 5 tonnes/hour
Krasnodar, Russia

Containerised Sand Grading Plant -
specially designed for race course
landscaping in Saudi Arabia

Skid mounted Maize Milling Plant - 8
tonnes/hour - for World Food Programme,
Tanzania

Containerised Milling & Sifting System - specially
designed for producing graded pyrethrum (a natural
insecticide from crysanthum flowers), Uganda
